TECHNICAL CIRCULAR NO. - 31

No.MS/TS-II/Circular/ 3174

Date : 22.10.1999

On C.I. and D.I. Pipelines, C.I. specials as well as M.S. Specials and fittings are being used with lead joints; due to non availability of C.I. and D.I. specials and fittings with rubber joints.

This is most undesirable since pig lead joints are troublesome. There is also a possibility of increase in the Lead content in drinking water, which is hazardous to health.

Now Mechanical Joints and fittings are available on R.C. made by M.J.P. Therefore, unless the specific site conditions require lead joints, all jointing / repairs can be carried out by using Mechanical Joints and Fittings with rubber joints, where indispensable.

All field officers should note this and act accordingly.

D.A. : Nil.
